The copyright page of the *DSM-5* contains the following statement:

Written in the editorial style of the *Publication Manual of the American Psychological Association* (APA, 2020), the above information would be translated into APA style reference entry as follows:

**Basic Reference List Entry Style**

Dr. D.’s Note: As of 09-04-13, individual chapters and other parts of *DSM-5* have been assigned DOIs. When using the online edition of the *DSM*, give the DOI in the publisher position.

**Parenthetical Citation With Abbreviation Included**

*Diagnostic and Statistical Manual of Mental Disorders* (5th ed.; *DSM-5*; American Psychiatric Association).

**Subsequent Parenthetical Citations**

(American Psychiatric Association, 2013)

(World Health Organization, 2019)

**Narrative Citation with Abbreviation Included**

American Psychiatric Association’s (2013) *Diagnostic and Statistical Manual of Mental Disorders* (5th ed.; *DSM-5*).

**Subsequent Narrative Citations**

American Psychiatric Association (2013)

World Health Organization (2019)
Example of In-Text Narrative Citation With Abbreviation Included
Here’s how it looks when a narrative citation (with abbreviation included) is used in the narrative text of an article:

The American Psychiatric Association’s (2013) *Diagnostic and Statistical Manual of Mental Disorders* (5th ed.; DSM-5) is the most widely accepted nomenclature used by clinicians.

Dr. D.’s Note: In the above example, notice that title case and italics are used for the title and abbreviation of the title, although the punctuation marks are not italicized.

Example of In-Text Parenthetical Citation With Abbreviation Included
Here’s how it looks when used in a shorter sentence and a more cumbersome parenthetical expression (with abbreviation included):

The *Diagnostic and Statistical Manual of Mental Disorders* (5th ed.; *DSM-5*; American Psychiatric Association) is the most widely accepted nomenclature used by clinicians for the classification of mental disorders.

Dr. D’s Note: In the above example, the word “the” is capitalized because it is the first word in the sentence; however, the word “the” is not italicized in the above example because it is not a part of the book’s title. In this sentence, the word *the* is italicized for emphasis (although in APA style italics are generally not used for mere emphasis unless the emphasis cannot be better conveyed by syntax).

Abbreviations
A term to be abbreviated must, on its first appearance, be written out completely and followed immediately by its abbreviation in parentheses (or, if already in parentheses, use brackets). Thereafter, use the abbreviation in text without further explanation (p. 173). Do not switch between the abbreviated and written-out forms of a term. For additional details, see APA Style blog by Chelsea Lee (2015).

When an abbreviation or acronym is used to identify the author, introduce it at first reference:

The *Diagnostic and Statistical Manual of Mental Disorders* (5th ed.; *DSM-5*; American Psychiatric Association [APA], 2013) is the most widely accepted nomenclature used by clinicians and researchers for the classification of mental disorders. The changes involving the removal of the legal problems criterion and the addition of a craving criterion were retained in the final revision of the diagnostic criteria (APA, 2013).

Once introduced, the acronym *DSM–5* can be used instead of using the title and edition:

The *DSM–5*’s classification involves a shift from the traditional categorical approach to a dimensional approach. The changes involving the removal of the legal problems criterion and the addition of a craving criterion were retained in the final revision of the diagnostic criteria (American Psychiatric Association, 2013).

When citing an author more than once in the same paragraph, remember the following guideline that is quoted from the *Publication Manual of the American Psychological Association* (APA; 2020, p. 266):

Within the same paragraph, when the name of the author is part of the narrative, you need not include the year of publication in subsequent narrative (nonparenthetical) citations, as long as the study cannot be confused with other studies cited in the article. Include the year in all parenthetical citations. When both the name and the year are in parentheses, include the year in subsequent parenthetical citations within the same paragraph.
Tests, Scales, and Inventories

According to APA (2020, p. 340), the title of a test, a scale, or an inventory should be capitalized using title case whenever it appears in the text of a paper. Although the test title may be italicized in a reference (e.g., in the name of a manual or when the test itself is cited), in the text, the title of a test should appear in title case in standard (nonitalic) type.

**Parenthetical citation:** (Beck, Steer, & Brown, 1996)

**Narrative citation:** Beck, Steer, and Brown (1996)

A frequently asked style question is the following: “How do I present an abbreviation in conjunction with an in-text citation?”

APA style blogger Chelsea Lee (2015, p. 1) provides a useful guideline, which is quoted below:

Sometimes an abbreviation is presented along with an in-text citation. For example, you might cite a test or measure that has an abbreviation and then provide its citation (for a common case, here is how to cite the *DSM*–5).

If the spelled-out version of the term appears in the narrative for the first time, put the abbreviation and the author–date citation in parentheses after it, separated by a semicolon. Do not use back-to-back parentheses.

- **Correct:** We assessed depression using the Beck Depression Inventory–II (BDI–II; Beck, Brown, & Steer, 1996).

- **Incorrect:** We used the Beck Depression Inventory—II (BDI–II) (Beck, Steer, & Brown, 1996).

If the spelled-out version of the term appears in parentheses for the first time, put the abbreviation in brackets after it, followed by a semicolon and the author–date citation.

- **Example:** Our assessment of depression (as measured via scores on the Beck Depression Inventory–II [BDI–II]; Beck, Steer, & Brown, 1996) showed significant incidence of this disorder in the population.
APA (2020, p. 324) Style Guidelines

- When the author and publisher are the same, omit the publisher from the source element in the reference list entry.

- It is common, but not required, to identify the title (and edition) of a diagnostic manual in the text. Group authors and manual titles can be abbreviated in the text (with a few exceptions) but not in the reference list (see Sections 6.25 and 8.21).

- Generally, include a citation for a manual the first time it is mentioned in the text. If the first mention appears in a heading, do not cite the manual in the heading; rather, cite it within the first paragraph of that section or soon thereafter.

- Do not repeat the citation for a subsequent general mention of a manual. Repeat a citation only when it directly supports a statement (e.g., quoting, paraphrasing).

- Additional examples and guidance for citing other editions of and entries in the DSM and ICD are available on the APA Style website (https://apastyle.apa.org/).

Note: MLA guidelines assume that readers can track down most online sources by entering the author, title, or other identifying information in a search engine or a database. Consequently, MLA does not require a URL in citations for online sources such as websites. However, some instructors still ask for it, so check with your instructor to determine his or her preference.
